PROFILE

Computational linguist and developer, bridging formal linguistics and applied NLP. I build end-to-end language-processing applications (Python, FastAPI, spaCy) and integrate large language models (LLMs) through **prompt engineering** with Claude and GPT for classification, evaluation, and semantic enrichment. Doctoral researcher (University of Cádiz) specializing in knowledge representation and terminology. Focused on building generative-AI solutions and LLM-based assistants.

EXPERIENCE

NLP Developer & Computational Linguist · NeupaTerm (Doctoral Project) 2025 – present

- Design and development of a terminology-management SaaS platform with a full NLP pipeline (React/Vite + FastAPI + PostgreSQL + spaCy).
- Integration of LLMs through prompt engineering (Claude, GPT) for term classification, linguistic evaluation, and semantic enrichment of databases.
- spaCy processing: named-entity recognition (NER), disambiguation of polysemous terms, and relation extraction over specialized multilingual corpora (EN–ES).
- Terminology data model designed as a conceptual graph (hierarchical, part-whole, and associative relations), with export to CSV, JSON, and TMX for professional workflows.

NLP Researcher — Practicum · Institute of Applied Linguistics (ILA), University of Cádiz 2025 · 150 h

- Development of a Streamlit application for automated cleaning and normalization of large datasets (.txt/JSON), with rule- and NLP-based linguistic quality control.
- Collaborated on a RAG system for applied linguistic research (document ingestion and LLM-based retrieval).

TECHNICAL SKILLS

LLMs & Prompt Engineering	Prompt engineering with Claude and GPT (classification, evaluation, semantic enrichment); familiarity with RAG (collaboration on an Ollama + llama3.2 system) and vector retrieval.
Python	FastAPI, Streamlit, API integration, NLP pipelines, data cleaning and normalization scripts.
NLP & spaCy	NER, relation extraction, entity disambiguation; NLTK, Hugging Face (familiarity).
Knowledge representation	Formal conceptual relations (hierarchy, meronymy, association); SKOS, RDF, and OWL (familiarity); SPARQL (introductory).
Databases	PostgreSQL (in production on NeupaTerm); SQL (active practice); knowledge graphs (familiarity).
Corpus & formats	Sketch Engine, UAM CorpusTool, Lingmotif, JSON, CSV, TMX, XLIFF (multilingual ingestion and export).
Languages	Spanish (native) · English (professional) · French (basic).

EDUCATION

Master's in Language Sciences (Applied Linguistics)

University of Cádiz · 2024–2025

Master's thesis awarded highest distinction (Matrícula de Honor). Corpus and applied computational linguistics (Python, spaCy, NLTK; Sketch Engine, AntConc, Lingmotif); introduction to ontologies and knowledge representation. Thesis on the specialized language of video games (conceptual relations, neology, borrowings and calques; EN–ES corpus).

PhD in Applied Linguistics (in progress)

University of Cádiz, ILA · 2025–present

Terminology and languages for specific purposes: formal terminology management, neology, and knowledge representation in corpora of competitive video games (CS2, League of Legends, Valorant). Application of NLP to terminology extraction and analysis over an EN–ES multilingual corpus.

Double Bachelor's: Linguistics & Applied Languages / English Studies

University of Cádiz · 2017–2022

General and applied linguistics: lexical semantics, morphology, formal syntax, phonetics/phonology (ES–EN); introduction to terminology and terminological equivalence.

RESEARCH & PUBLICATIONS

- Conference paper at AESLA 2026 (Granada): terminology management and NLP applied to the specialized lexicon of competitive video games.
- Article in preparation for RESLA (2026): neologisms, calques, and polysemy in the specialized language of video games.
- Accepted conference papers: Tránsitos Congress (Cádiz, Sept. 2026) and AJL (Salamanca, Oct. 2026).
- Book review accepted in the Revista de Investigación Lingüística (2026); second review in progress for John Benjamins.
